

## [Raku Raku QR Master] Operating Manual for Data Entry

## 1. Operating Enviroment

[Raku Raku QR Master] The system will operate under the following circumstances.

Microsoft Windows2000, WindowsXP, Windows Vista, Windows7, Windows8,Windows10

Microsoft Excel2000, Excel2002, Excel2003, Excel2007, Excel2010, Excel2013

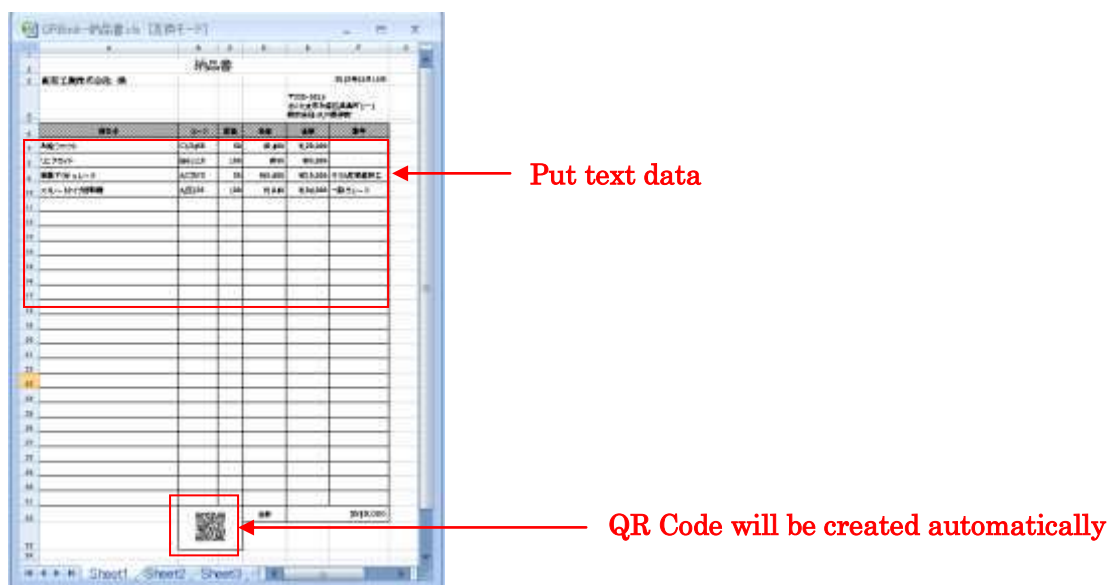

## 2. How to" Setup"

[Raku Raku QR Master] can be set up as follows

Execute [setup.exe] (Date entry set up file) on the PC where “data of QR Code” will be uploaded. You will receive “setup.exe” from those who receive “Data with QR Code”.

### 3. How to" Use"

QR Code will be automatically created once you put text data in the designated cells whrer QR will be codified.

If there are so many QR codes, then it will take time if you input data in the Excel one by one. In that case, it' d better if you turn off the translation function by clicking "Translation Off" option on the upper menu bar. If you would like to put it back to the original condition, you just turn on the transration function by clicking "Translation On" QR Code will be re-translated automatically.

#### 4. Restrictions on editing data

Please note that QR Code will not be created if you operate the following functions.

- 1) QR Code will not be created if you change the encrypted data in the cell where the original QR Code exists;
- 2) QR Code will not be created in the new cells into which the data of the original cells are copied;
- 3) QR Code will not be created in the new sheets into which the data of the original sheets are copied;
- 4) QR Code will not be created if you move the sheet where the data of original sheet; and
- 5) QR Code will not be created if you change the numbers of rows and/or columns by inserting/deleting data in the cells where the original QR Code exists. .
